Task Properties**Task properties:**

Task Property	Description	Examples
Number	Unique numeric task number, which is automatically assigned, and not re-used even after a task is deleted.	#23
Full Path	Shows the full task path in the tasks hierarchy.	Projects > Sample, Inc [#2]
Name	Use this field to store a bug summary or project name. The size is limited to 200 characters.	TrackStudio Enterprise
Alias	Use Alias to assign a short name to a project. Use the task alias instead of its number to jump to a task quickly.	TS
Category	The type of a task is defined by its category. Possible task states and transitions (i.e. the workflow) depend on the category.	Folder, Product Version, Software Bug
State	Task state.	New, Resolved, Closed
Resolution	Task resolution.	fixed, duplicate
Priority	Task priority.	low, normal, high
Submitter	The user who has submitted this task.	John Smith
Handler	The user or the user status who has been assigned to this task.	John Smith
Submit Date	Date/time when the task was submitted.	01/01/2005
Update Date	Date/time of the last task update. The last update date for a project is the maximum of the last update dates of any of its subtasks.	2005-01-01
Close Date	Date/time when the task was closed (if the task is closed). Set for a task when a task's workflow is transitioned into a state designated as Final .	2005/01/01
Deadline	Date when the current task must be finished.	2005/01/01
Budgeted Time	Estimated time (in hours) allocated for the task. Each task has one Task Budget common for all users. This is working time, not calendar time.	5 hh 30 mm 10 ss
Actual Time	Elapsed task processing time (working time, not calendar time). The actual time for the project is the sum of actual times of current task and all its subtasks.	3 hh 10 mm 05 ss
Description	Use the task description, if its name is not informative enough.

Abstract:

...a task controller, and a disc I/O controller. These four controllers operate in a **hierarchy** of control. Each controller exercises control over a given level of work in the computing...

Summary of the Invention:

...of stored computer programs in a multiprogramming environment. The control system is composed of a **hierarchy** of four stored program controllers with each controller exercising control over a given level of ...

...Said Master Controller is at the top of the controller **hierarchy** and communicates with all processors and devices through an array of communication registers. Several of...

...from the operation of Command Controller is controlled by the next level of the control **hierarchy**, the Task Controller. To obtain the optimum efficiency of the virtual processors, it is desirable...

...a processor in an unproductive manner. The Task Controller is the next in the controller **hierarchy** and has the function of scheduling each task, monitoring task linkage, managing transient system central...

...computer having a plurality of processors with a control system in the computer having a **hierarchy** of controllers...

...Another object of this invention is to provide a stored program computer having a **hierarchy** of four stored program controllers with each controller exercising control over a given level of...

...is to provide a stored program computer having a plurality of controllers arranged in a **hierarchy** of control with each controller responsible for servicing computer resources and making scheduling decisions.

Description of the Invention:

...It is to be understood that the processor system thus has a memory or storage **hierarchy** of five levels. The most rapid access storage is in the CPU 34 which has...The Job Parameter **Tables** provide system components the necessary linkages to access **Job** Specification Language

statements, terminal reservation information, the **Job** File, **synonyms** defined for cataloged files, **Job** Log messages, output print/punch files, and other information associated with particular jobs...
